

Frame Finishes

Frame finishes are available in virtually any color of high performance paint and a range of anodized finishes from Satin Clear to Black. Our most popular frame finish is Dark Bronze anodized. We refer to it as our “Stock Color” and maintain a significant inventory to facilitate competitive pricing and short lead times.

Based on customer preference we have established an array of Designer Colors, which now include Western White and Satin Anodized. If one of our Designer Colors meets the criteria for your project, it will facilitate the process and reduce lead times compared to a Custom Color.

If your project requires a Custom Color, Western is happy to accommodate, and virtually any color is possible in high performance paint. We will color match a sample of your choice to meet your specific design criteria.

Our painted finish for Designer and Custom Colors will conform to a minimum of AAMA 2604-2, “Specification for High Performance Organic Coatings on Aluminum Extrusions and Panels. As an option, we can provide a 70% Kynar finish conforming to AAMA 2605-2, “Specification for Superior Performing Organic Coatings on Aluminum Extrusions and Panels”.

Our anodized finish will conform to a minimum of “Commercial Class II”. As an option we can provide a “Class I” anodized finish. Although anodized finishes are extremely durable and long lasting, high performance paint will perform better in corrosive environments such as salt air near the ocean.

We appreciate your interest and welcome you to visit our Phoenix, Arizona factory and design center or our website at www.westernwindowssystems.com

Common Colors Choices

Western can provide unlimited custom colors to meet your specific criteria.
