Live Better

Large Sliding and Folding Glass Doors
“We have six 12-foot-wide by 6-foot-tall panel windows that are very energy efficient.”

- Dean Papadopoulos, homeowner
Outdoor living areas have evolved from traditional patios to bold, reimagined spaces that attach to the home and blend the indoors with the outside. These new indoor-outdoor living rooms expand space, frame views, and let in fresh air and natural light.

Western Window Systems is passionate about indoor-outdoor living. Our sliding and folding glass doors are more than just entryways – they’re architectural elements that change space beautifully and efficiently for years to come.
When you decide on a sliding or folding glass door from Western Window Systems, you’re choosing the same high-quality, long-lasting product preferred by architects of luxury homes. Combining exceptional performance with clean, minimal design, the desirability is in the details.

Here’s how we do it:

- Our wide glass panels provide more light and maximize views.
- Heavy-duty roller hardware allows our doors to move easily and smoothly.
- Thermal, water, air, and structural testing help to protect your home.
- We use heavy duty stainless steel hardware.
- A concealed locking system provides extra strength and protection.
“We hosted a wedding shower and our guests loved the big indoor-outdoor space. The doors make the house perfect for entertaining.”

- Dr. Teryn Clarke, homeowner
Our Series 600 Multi-Slide Door features large, unobstructed rolling glass panels that stack or slide into pockets for extra wide openings that eliminate the barrier between indoors and out. Freed from a boundary to the outside, the expanded indoor-outdoor area is perfect for entertaining or relaxing with family and friends.

Available in nearly any size and configuration, the Series 600 lets you customize as you see fit — including options such as handles, finishes, and an aluminum screen.
“I love the way they look. They’re very sturdy and have great UV protection.”

- Kartik Jaggi, homeowner
The ability of the Series 9500 to completely open up to the outdoors is what makes it so unique. Designed to smoothly stack and fold against side walls, it creates a huge opening from corner to corner, connecting the indoors with the outside and expanding living space.

Options such as floor tracks, inswing and outswing capabilities, and countless sizes, configurations, and finishes let you customize the Series 9500 Bi-Fold Door to your individual style.
Our dedication to high-quality door systems extends to energy efficiency and sustainability. When we build our sliding and folding doors, we utilize materials and resources as effectively as possible. And because our products are built to last, they stay out of landfills longer.

In addition:

- Our thermally broken aluminum frames prevent heat transfer and condensation.
- Triple-coat glass reflects heat while allowing light to pass through.
- Our doors are subjected to energy and performance tests.
- We recycle our aluminum and use recycled materials.
- We reduce international shipping costs by making all our products in the U.S.
A leader in Quality, Innovation, and Service

In 1959, Western Window Systems produced its first glass product in Phoenix. From this simple beginning, we’ve become what we are today: a recognized leading designer and manufacturer of high-quality door and window systems in North America.

Our legacy of quality manufacturing is based on three core values: excellence, innovation, and partnership. All of our products are built in Arizona using superior materials that promote longevity. Our commitment to innovation has resulted in numerous product awards from the building and remodeling industry. And because we’re passionate about actively building relationships, we’re at your service via telephone or online.

If you have a question or need more information, contact us at 1-877-268-1300 or through westernwindowsystems.com.
